

Running ISA in parallel with the **snow** package

Gábor Csárdi

1 Running ISA in parallel

In this document we show a little example on how to speed up ISA analysis [?, ?, ?] by running the ISA iterations in parallel, on a computer cluster, or a multiprocessor machine.

Since a typical ISA analysis consists of using a range of row/column thresholds and these runs are independent of each other; it is trivial to parallelize the task by performing the iterations for different threshold parameters on different processors or computers. Here we show an example on how to do this easily with the **snow** [?] and the **Rmpi** [?] packages:

```
> library(isa2)
> library(snow)
> library(Rmpi)
```

We generate some simple in-silico data.

```
> pdata <- isa.in.silico()
```

Next, we create the MPI cluster, with eight working nodes. You need to have a working MPI installation for this. See more in the documentation of the **Rmpi** and **snow** packages.

```
> clu <- makeMPIcluster(8)
```

```
8 slaves are spawned successfully. 0 failed.
```

Now we load the **isa2** package on all nodes and distribute the input data to them.

```
> invisible(clusterEvalQ(clu, library(isa2)))
> clusterExport(clu, "pdata")
```

Next, we create a big matrix in which each row is a combination of the threshold parameters. This will be needed for the parallel run.

```
> thr <- seq(1,3,by=0.2)
> thr.list <- expand.grid(thr, thr)
```

First we run the ISA on a single processor only, and measure the running time.

```
> system.time(modules <- isa(pdata[[1]], thr.row=thr, thr.col=thr))

   user  system elapsed 
24.114   1.221  25.839
```

Let us now do a parallel run, again, with measuring the running time. If you are really running this on multiple CPUs, then it is much faster.

```
> system.time(modules.par <- parApply(clu, thr.list, 1, function(x) {
  isa(pdata[[1]], thr.row=x[1], thr.col=x[2])
}))

   user  system elapsed 
 0.331   0.208  10.537
```

Finally, stop the cluster.

```
> stopCluster(clu)

[1] 1
```

2 Session information

The version number of R and packages loaded for generating this vignette were:

- R version 3.2.0 beta (2015-04-02 r68137), x86_64-apple-darwin10.8.0
- Locale:
en_US.UTF-8/en_US.UTF-8/en_US.UTF-8/C/en_US.UTF-8/en_US.UTF-8
- Base packages: base, datasets, graphics, grDevices, methods, stats, utils
- Other packages: isa2 0.3.4, Rmpi 0.6-5, snow 0.3-13
- Loaded via a namespace (and not attached): grid 3.2.0, lattice 0.20-31, tools 3.2.0
