

Discharge coefficients for full width, vertical, and
inclined sharp-crested rectangular weirs

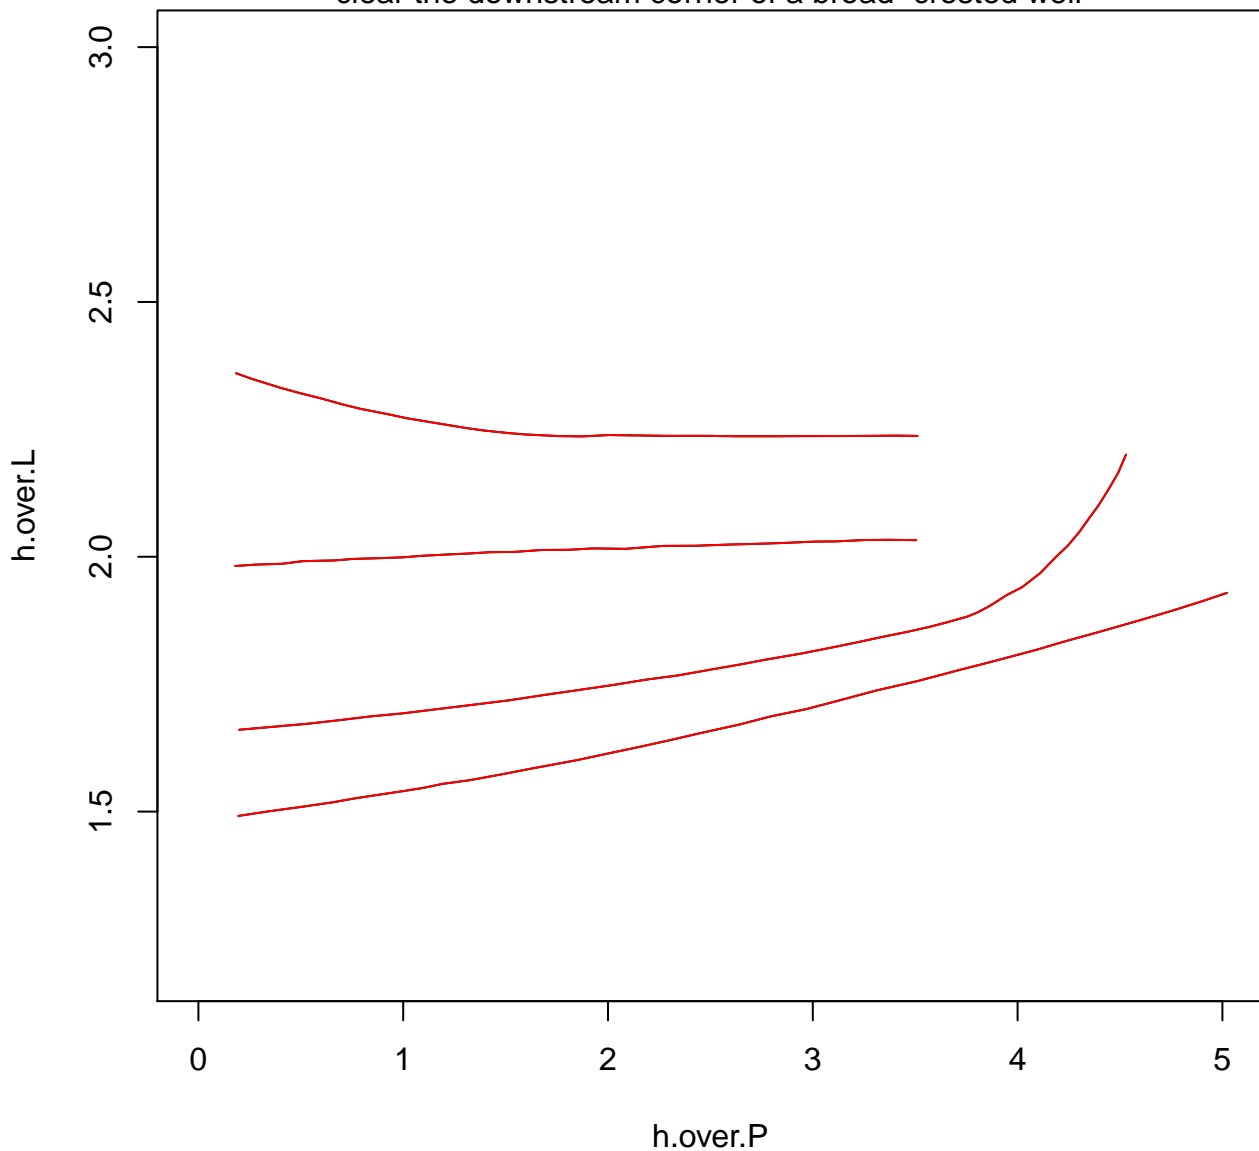

Definition fo adjustment factor, K_c , for contracted sharp-crested weirs

Definition of adjustment factor, k_t , for submerged sharp-crested rectangular weirs

Minimum h/L ratio for which the lower nappe will clear the downstream corner of a broad-crested weir

Coefficients of discharge for full width, broad-crested weirs
with downstream slope 1:1 and various upstream slopes
