

# Package ‘nephro’

October 16, 2023

**Type** Package

**Title** Utilities for Nephrology

**Version** 1.4

**Date** 2023-10-10

**Author** Cristian Pattaro, Ryosuke Fujii, Janina Herold

**Maintainer** Cristian Pattaro <cristian.pattaro@eurac.edu>

**Description** Set of functions to estimate kidney function and other phenotypes of interest in nephrology based on different biomechimal traits.

**License** GPL (>= 3)

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2023-10-16 21:40:02 UTC

nephro-package

*Biostatistics utilities for nephrology*

## Description

This package contains a set of tools for the estimation of kidney function. Kidney function is assessed by means of the Glomerular Filtration Rate (GFR), which can be estimated using different biomarkers. The most commonly used ones are serum or plasma creatinine and cystatin C.

Included in the package are the following GFR estimating functions: the Modification of Diet in Renal Disease (MDRD) study equations based on four ([MDRD4](#)) or six ([MDRD6](#)) parameters (Levey 1999; Levey 2006); the CKD-Epi equations for serum creatinine with the race coefficient ([CKDEpi.creat](#)) and without the race coefficient ([CKDEpi\\_RF.creat](#)); the CKD-Epi equation for cystatin C ([CKDEpi.cys](#)); the CKD-Epi equation for the combination of creatinine and cystatin C with ([CKDEpi.creat.cys](#)) and without ([CKDEpi\\_RF.creat.cys](#)) the race coefficient (Inker 2012; Inker 2021); the three equations proposed by Stevens 2008 based on cystatin C only ([Stevens.cys1](#)), age- and sex-weighted cystatin C ([Stevens.cys2](#)), and a combination of cystatin C and creatinine ([Stevens.creat.cys](#)); the classic Cockcroft and Gault 1976 equation for creatinine clearance estimation ([CG](#)); the equation by Virga (2007) ([Virga](#)); the race-free equations developed by the European Kidney Function Consortium (EKFC) including sex and age based on serum creatinine ([EKFC.creat](#)) (Pottel 2021) and based on serum cystatin C with ([EKFC.cys](#)) and without ([EKFC\\_SF.cys](#)) the sex coefficient (Pottel 2023); the full age spectrum (FAS) equations using serum creatinine ([FAS.creat](#)) (Pottel 2016), cystatin C ([FAS.cys](#)), and their combination ([FAS.creat.cys](#)) (Pottel 2017); the Schwartz bedside formula ([Schwartz.Bedsite](#)) (Schwartz 2009).

A comparative description of several functions included in the initial version of the package can be found in Pattaro (2013). Extensive literature does exist that compares the methods described.

## Details

Package: nephroext  
 Type: Package  
 Version: 1.4  
 Date: 2023-10-10  
 License: GPLv3

## Description

Creatinine clearance is estimated with the Cockroft and Gault formula.

## Usage

```
CG(creatinine, sex, age, wt)
```

**Arguments**

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
wt	Numeric vector with weight in kg

**Value**

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

**Author(s)**

Cristian Pattaro

**References**

Cockcroft DW, Gault MH. Prediction of creatinine clearance from serum creatinine. *Nephron* 1976; **16**: 31-41.

**See Also**

[CKDEpi.creat](#), [MDRD4](#), [Virga](#)

---

CKDEpi.creat

*CKD-EPI equation for serum creatinine*

---

**Description**

GFR is estimated with the CKD-EPI Study equation based on IDMS serum or plasma creatinine.

**Usage**

```
CKDEpi.creat(creatinine, sex, age, ethnicity)
```

**Arguments**

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals

**Value**

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

**Author(s)**

Cristian Pattaro

**References**

Inker LA, *et al.* Estimating glomerular filtration rate from serum creatinine and cystatin C. *N Engl J Med* 2012; **367**: 20-29.

---

CKDEpi.creat.cys

*CKD-EPI equation for creatinine and cystatin C*

---

**Description**

CKD-EPI equation to estimate GFR based on a combination of creatinine and cystatin C

**Usage**

`CKDEpi.creat.cys(creatinine, cystatin, sex, age, ethnicity)`

**Arguments**

<code>creatinine</code>	Numeric vector with serum or plasma creatinine values in mg/dl
<code>cystatin</code>	Numeric vector with serum or plasma cystatin C values in mg/dl
<code>sex</code>	Numeric vector with 0 for females and 1 for males
<code>age</code>	Numeric vector with age in years
<code>ethnicity</code>	Numeric vector with 0 for non-Black and 1 for Black individuals

**Value**

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

**Author(s)**

Cristian Pattaro

**References**

Inker LA, *et al.* Estimating glomerular filtration rate from serum creatinine and cystatin C. *N Engl J Med* 2012; **367**: 20-29.

CKDEpi.cys

*CKD-EPI equation for cystatin C*

---

### Description

GFR is estimated with the CKD-EPI equation for cystatin C proposed by Inker et al., N Engl J Med 2012

### Usage

`CKDEpi.cys(cystatin, sex, age)`

### Arguments

cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

### Value

The function returns a numeric vector with eGFR values in ml/min/1.73  $m^2$ .

### Author(s)

Cristian Pattaro

### References

CKDEpi\_RF.creat

*Race-free CKD-EPI equation for serum creatinine*

---

### Description

GFR is estimated with the CKD-EPI Study equation based on serum creatinine without the ethnicity coefficient.

### Usage

`CKDEpi_RF.creat(creatinine, sex, age)`

**Arguments**

<code>creatinine</code>	Numeric vector with serum or plasma creatinine values in mg/dl
<code>sex</code>	Numeric vector with 0 for females and 1 for males
<code>age</code>	Numeric vector with age in years

**Value**

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

**Author(s)**

Ryosuke Fujii

**References**

Inker LA, *et al.* New creatinine- and cystatin C-based equations to estimate GFR without race. *N Engl J Med* 2021; **385**: 1737-1749.

`CKDEpi_RF.creat.cys`    *Race-free CKD-EPI equation for serum creatinine and cystatin C*

**Description**

CKD-EPI equation to estimate GFR based on a combination of creatinine and cystatin C without the ethnicity coefficient

**Usage**

```
CKDEpi_RF.creat.cys(creatinine, cystatin, sex, age)
```

**Arguments**

<code>creatinine</code>	Numeric vector with serum or plasma creatinine values in mg/dl
<code>cystatin</code>	Numeric vector with serum or plasma cystatin C values in mg/l
<code>sex</code>	Numeric vector with 0 for females and 1 for males
<code>age</code>	Numeric vector with age in years

**Value**

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

**Author(s)**

Ryosuke Fujii

**References**

EKFC.creat

*EKFC equation for serum creatinine*

---

**Description**

EKFC equation for serum creatinine modified from FAS equation

**Usage**

`EKFC.creat(creatinine, sex, age)`

**Arguments**

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years

**Value**

The function returns a numeric vector with eGFR values in ml/min/1.73 m<sup>2</sup>.

MDRD4

*Four-parameter MDRD study equation*

---

### Description

GFR is estimated with the 4-parameter Modification of Diet in Renal Disease (MDRD) study equation.

### Usage

```
MDRD4(creatinine, sex, age, ethnicity, method = "IDMS")
```

### Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals
method	Defaults is 'IDMS' for IDMS-traceable creatinine; write 'other' if not IDMS

### Value

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

### Author(s)

Cristian Pattaro

### References

MDRD6

*Six-parameter MDRD study equation*

### Description

GFR is estimated with the 6-parameter Modification of Diet in Renal Disease (MDRD) study equation.

### Usage

```
MDRD6(creatinine, sex, age, albumin, BUN, ethnicity, method = 'IDMS')
```

**Arguments**

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
albumin	Numeric vector with serum or plasma albumin in g/dl
BUN	Numeric vector with blood urea nitrogen levels in mg/dl
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals
method	Defaults is 'IDMS' for IDMS-traceable creatinine; write 'other' if not IDMS

**Value**

A numeric vector with eGFR values in ml/min/1.73 m<sup>2</sup>.

Schwartz.Bedsid

*Bedside IDMS-traceable Schwartz GFR Calculator for Children*

---

**Description**

GFR is estimated with the Bedside Schwartz equation for Children based on IDMS serum or plasma creatinine.

This equation is valid in the 1-17 years age range.

**Usage**

`Schwartz.Bedsid(creatinine, ht, age)`

**Arguments**

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
ht	Numeric vector with height in cm
age	Numeric vector with age in years

**Value**

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

**Author(s)**

Stevens.creat.cys      *Stevens' formula for a combination of serum creatinine and cystatin C*

**Description**

GFR estimation using the 3rd formula proposed by Stevens et al. (Am J Kidney Dis 2008), which combines creatinine and cystatin C

**Usage**

Stevens.creat.cys(creatinine, cystatin, sex, age, ethnicity)

**Arguments**

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals

**Value**

The function returns a numeric vector with eGFR values in ml/min/1.73  $m^2$ .

Stevens.cys1

*GFR estimation using serum cystatin C*

---

## Description

GFR is estimated with the 1st formula proposed by Stevens et al. (Am J Kidney Dis 2008), i.e.: as a simple transformation of cystatin C, without using any other information

## Usage

`Stevens.cys1(cystatin)`

## Arguments

cystatin      Numeric vector with serum or plasma cystatin C values in mg/l

## Value

A numeric vector with eGFR values in ml/min/1.73  $m^2$ .

## Author(s)

Cristian Pattaro

## References

Stevens LA, *et al.* Estimating GFR using serum cystatin C alone and in combination with serum creatinine: a pooled analysis of 3,418 individuals with CKD. *Am J Kidney Dis* 2008; **51**: 395-406.

---

*Stevens.cys2*

---

*Stevens' formula for serum cystatin C, age, and sex*

---

## Description

GFR is estimated with the 2nd formula proposed by Stevens et al. (*Am J Kidney Dis* 2008), where cystatin C is weighted by sex and age

## Usage

```
Stevens.cys2(cystatin, sex, age, ethnicity)
```

## Arguments

cystatin	Numeric vector with serum or plasma cystatin C values in mg/l
sex	Numeric vector with 0 for females and 1 for males
age	Numeric vector with age in years
ethnicity	Numeric vector with 0 for non-Black and 1 for Black individuals

## Value

A numeric vector with eGFR values in ml/min/1.73 m<sup>2</sup>.

## Author(s)

Cristian Pattaro

## References

Stevens LA, *et al.* Estimating GFR using serum cystatin C alone and in combination with serum creatinine: a pooled analysis of 3,418 individuals with CKD. *Am J Kidney Dis* 2008; **51**: 395-406.

Virga

*Virga's formula*

---

## Description

Virga's formula is based on serum creatinine, sex, age, and body weight.

## Usage

```
Virga(creatinine, sex, age, wt)
```

## Arguments

creatinine	Numeric vector with serum or plasma creatinine values in mg/dl
sex	Numeric 0/1 vector: 0 for females, 1 for males
age	Numeric vector with age in years
wt	Numeric vector with weight in kg

## Value

A numeric vector with eGFR values in  $ml/min/1.73\ m^2$

## Author(s)

Cristian Pattaro

## References

Virga G, *et al.* A new equation for estimating renal function using age, body weight and serum creatinine. *Nephron Clin Pract* 2007; **105**: c43-53.
